Portfolio

MATTIA CANDELORO
INDUSTRIAL AND ENVIRONMENTAL DESIGNER

HELLO I'M

MATTIA CANDELORO

A 23 years old aspiring product designer, from Tortoreto Lido (TE, Italy), driven by the ambition to contribute to the material transition needed to address increasingly urgent environmental challenges. I dream a future in which design is accessible to everyone where beauty and function coexist, inspired by nature and its processes.

Education

Università degli studi di Camerino
Bac. Deg. in Industrial and Environmental Design
(2022- 2026)

LVMH
Inside LVMH Certificate
(Sep. 2023 - Nov. 2023)

I. .T.T. Crocetti Cerulli , Giulianova (TE)
Technical Diploma in Computer Technology
(2016 - 2021)

Softwares

Rhinoceros 3D
Adobe Indesign
Adobe Illustrator
Adobe Photoshop
Figma
Blender
Vizcom
DaVinci Resolve
Adobe Premiere Pro
Artivive

Languages

Italian
Native
English
Fluent B2 TOEFL cert.

Contacts

mattia.candeloron2@gmail.com

+39 348 319 8226

Hard skills:

Product design & development,
Prototyping
Product communication,
3D modelling and printing
Rendering,
Graphic design

Soft skills:

Problem solving
Critical thinking
User-centred design
Life Cycle Assessment (LCA) awareness.

Selected works

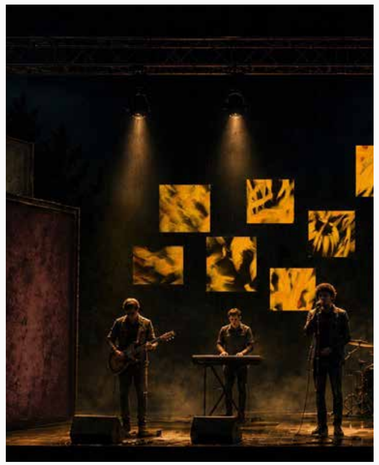

01

Firmamento

Solo project
4 months - 2026

02

Salotto Audiovisivo

Workshop project
1 week - 2026

03

Spiraluma

Team project
3 months - 2026

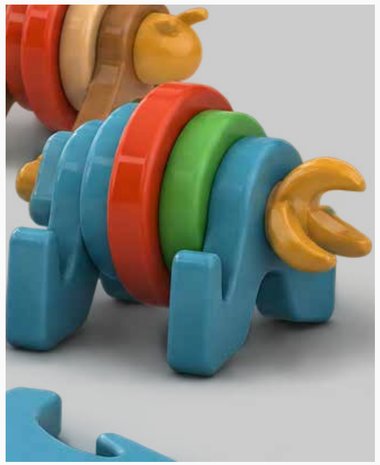

04

Look Behind

Team project
3 months - 2025

05

Ring Monsters

Team project
3 months - 2024

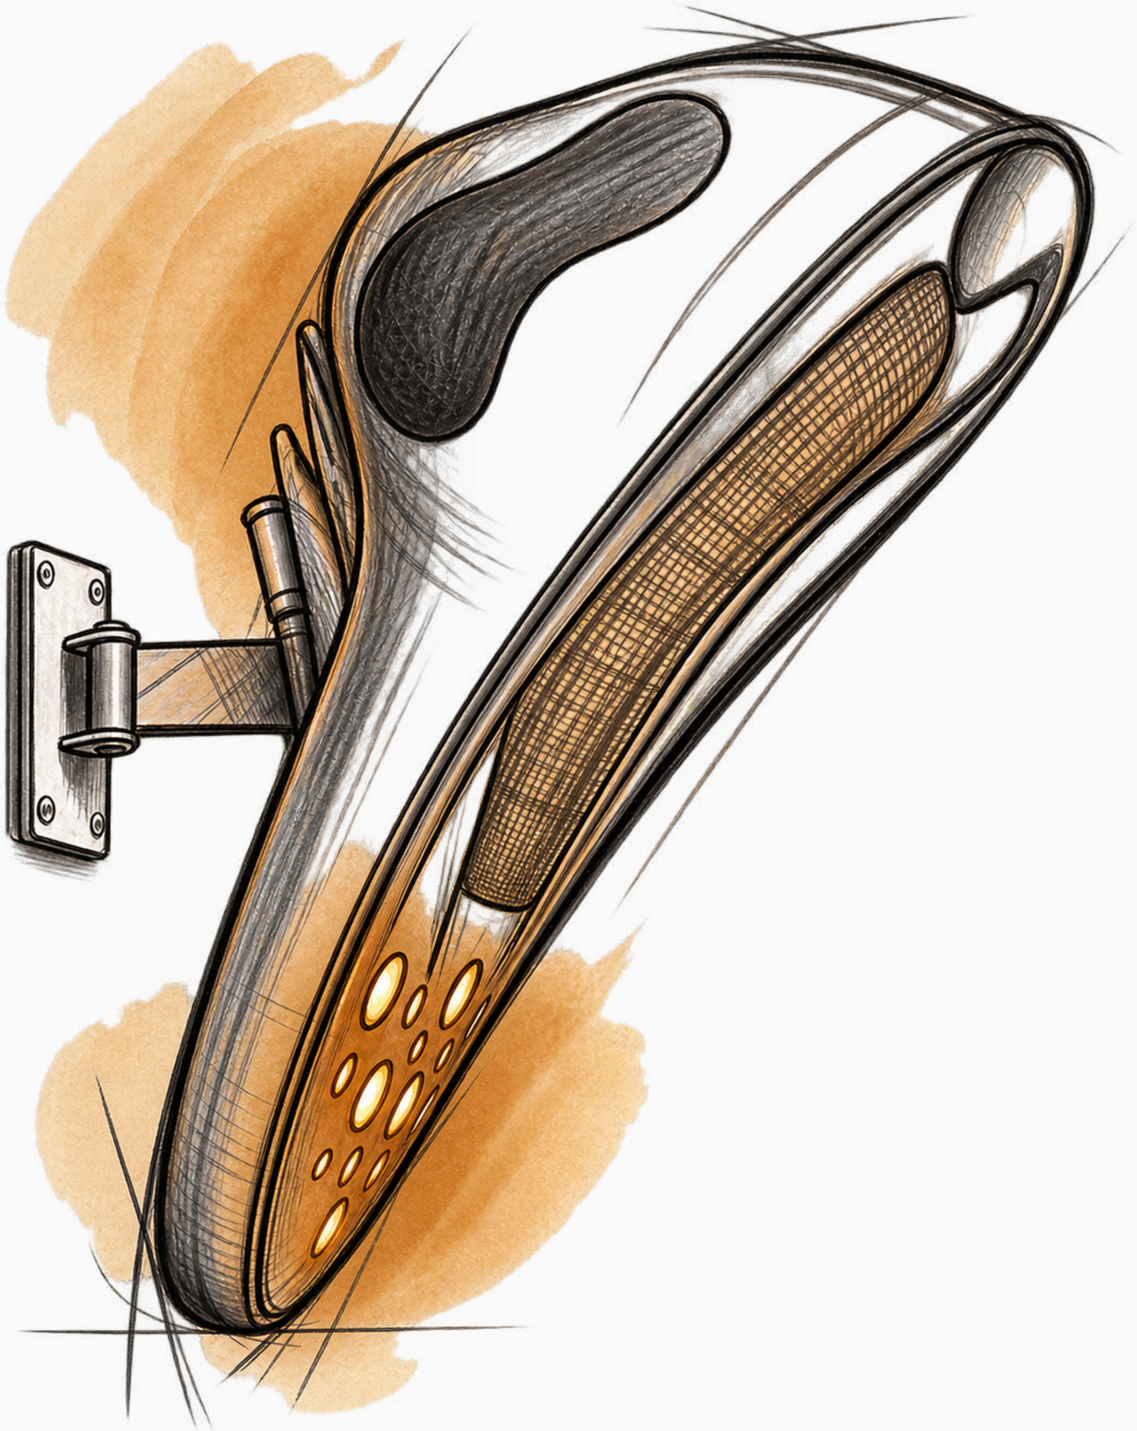

01

Firmamento

A product for well-being in metro waiting areas.
Solo project
4 months - 2026

The context

Following the COVID-19 pandemic, **anxiety disorders** rose by approximately **25% worldwide**, highlighting the significant impact that crowded and overstimulating environments can have on psychological well-being.

Firmamento was conceived to make underground transit spaces more humane and less stressful, through an intervention informed by research into **aromatherapy**, **lighting**, and **soft**, **non-threatening forms**, with the aim of reducing sensory overstimulation and fostering a greater sense of calm, safety, and well-being.

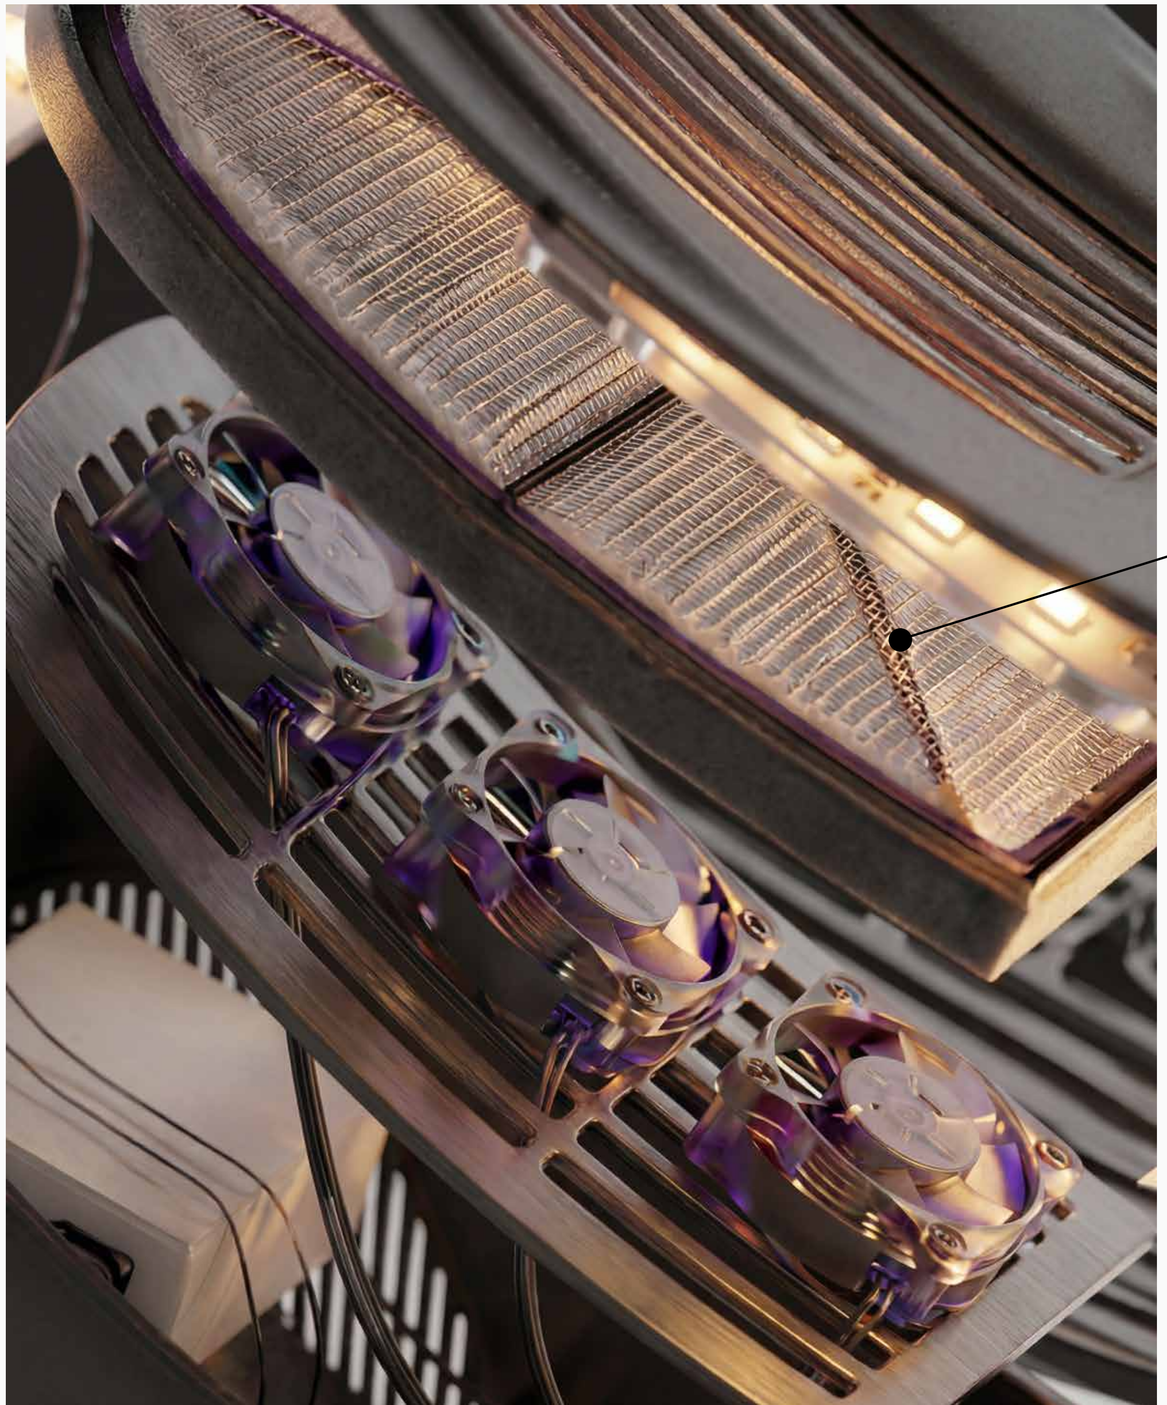

The role of the light.

Scientific research highlights controlled breathing and the visualization of a familiar, safe place as effective ways to reduce anxiety and PTSD symptoms. Inspired by this, I designed the lights to **evoke a starry sky**, using gentle pulses to support **focus and relaxation**.

How?

Firmamento combines an LED strip illuminating the wall and ceiling with randomly arranged LEDs that evoke a starry sky. Their soft, programmed fluctuations contrast with the harsh lighting of underground stations and help **reduce sensory tension**.

The perception of clean space has to keep pace with the real cleaning of it.

That’s why i designed a **full filters system** to clean the air of the subway and added **tridimensional curves** to the front of the object, so people’s gonna get that the air pushed by the train is set to be cleaned by Firmamento, helping people to relax and stop thinking about what they’re breathing.

The Parfume as a vehicle of relax and informations.

I decided to choose a cold atomizer to make sure that the little particles of scent **don't contribute to increase the humidity level**, that's the result.
The smell represent an **identity element** of the station and the place, using aromatherapy friendly smells it can help the user to relax in the metro station and to remember the specific station. I also designed an ipothetical **parfume palette** based on Rome and divided by day/night and the four seasons.

Proposed olfactory palette

Wisteria + Lemon Leaf + Mint	Lavender + White Tea + Orange
Lemon + Basil + Ozone	Maritime Pine + Cedar
Fig Leaf + Mandarin + Grass	Black Tea + Fig Wood + Chestnut
Grapefruit + Cypress + Ozone	White Tea + Birch + Clean Linen

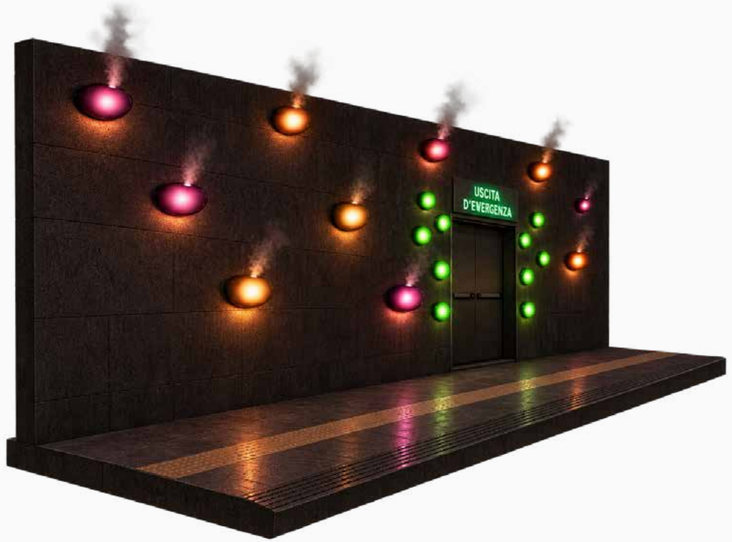

The shell.

The front **Polycarbonate panel** is derived from a rectangle with rounded corners, then curved on both sides. When positioned near a corner, its shape helps to hide sharp edges and **reduce the perception of threat** associated with them.

The structure, in Polycarbonate too is supported by a suspension arm, fixed to both the casing and the wall with four screws to ensure stability. The casing also features **internal reinforcements**, allowing the overall thickness of the object to be reduced without compromising structural strength.

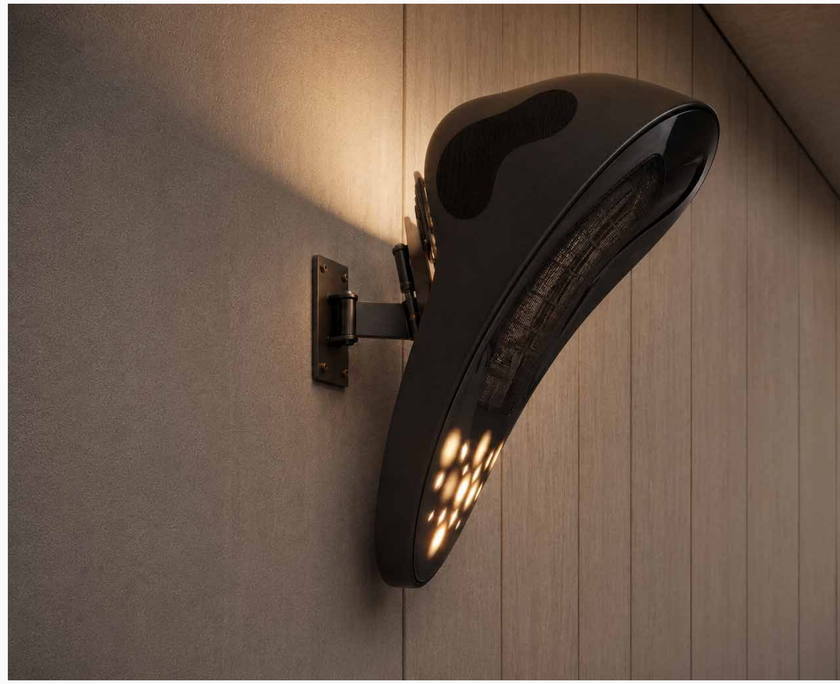

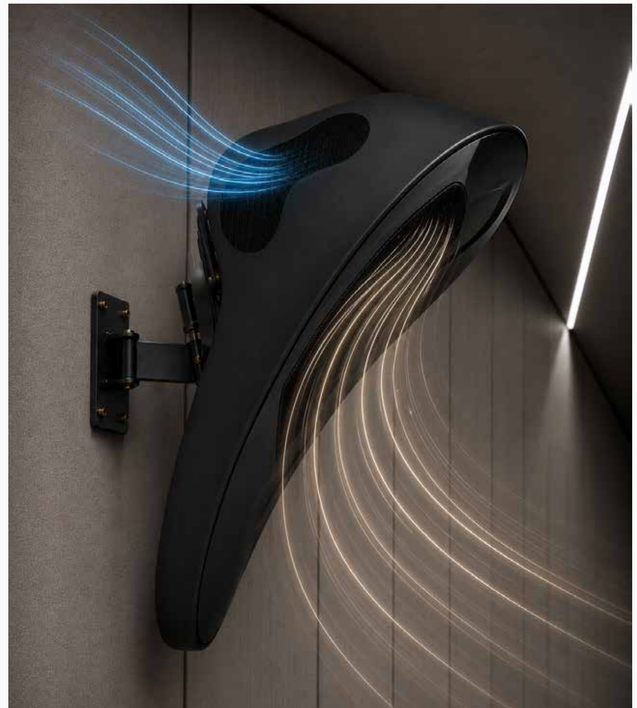

How I shaped the object.

I started with the idea of creating **small modular elements** in different colours. As the research developed, I decided to darken the sharper parts of the design to reduce the visual cues that could trigger the amygdala. From there, I explored **different shapes** and lighting solutions, gradually integrating the filtration system as well. The final direction sits somewhere between **fully organic forms and a more minimal, controlled aesthetic**.

MIRA

02

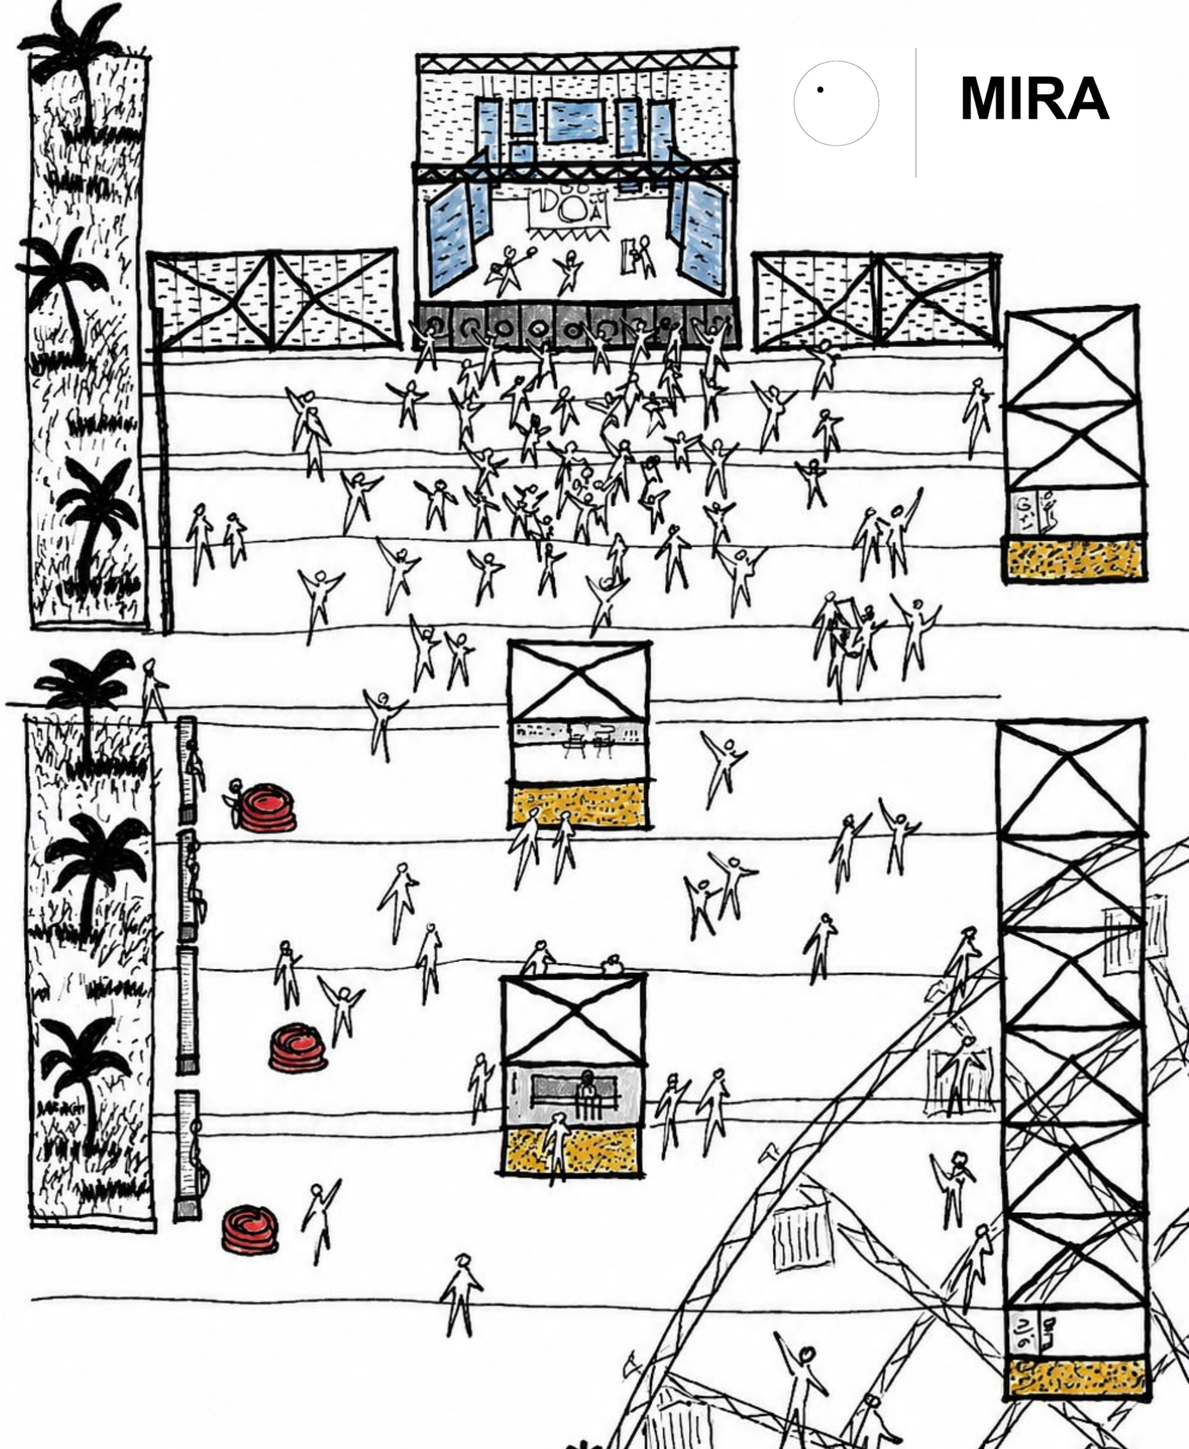

Salotto audiovisivo

From a project by the architect Michele Benignetti, founder of the studio “Mira”
Workshop project
1 week - 2026

The concept.

Starting from a project by the architect **Michele Benignetti**, founder of the studio Mira, and Andrea Di Febo, I had the opportunity to contribute to the set design and the planning of the entire **Reverie festival space**. The main goal was to create an installation that could use and enhance elements from my local territory, giving them a new value and identity, while keeping the overall cost close to zero.

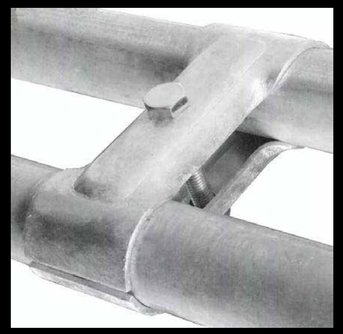

The stage

The proposal features lateral scenic elements conceived as softboxes, built with wooden frames and semi-transparent fabric. PAR LEDs placed behind them create a **soft**, **gradually shifting glow**, reminiscent of lantern light. Behind the musicians, rectangular video-mapped panels display natural imagery such as the sea, trees, branches and flowers.

The overall setting creates an **intimate audiovisual environment**, with warm, diffused lighting gently outlining the musicians' silhouettes. Rather than relying on strobe effects or visual spectacle, the design focuses on a subtle, immersive and evocative atmosphere.

Materials used

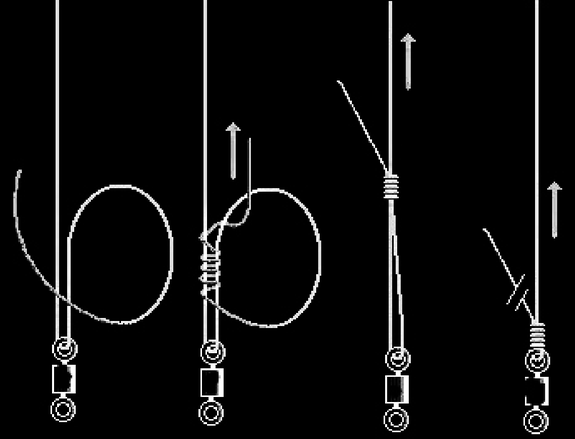

Main line, knots and swivels. Tubular sections and single-bolt double clamps.

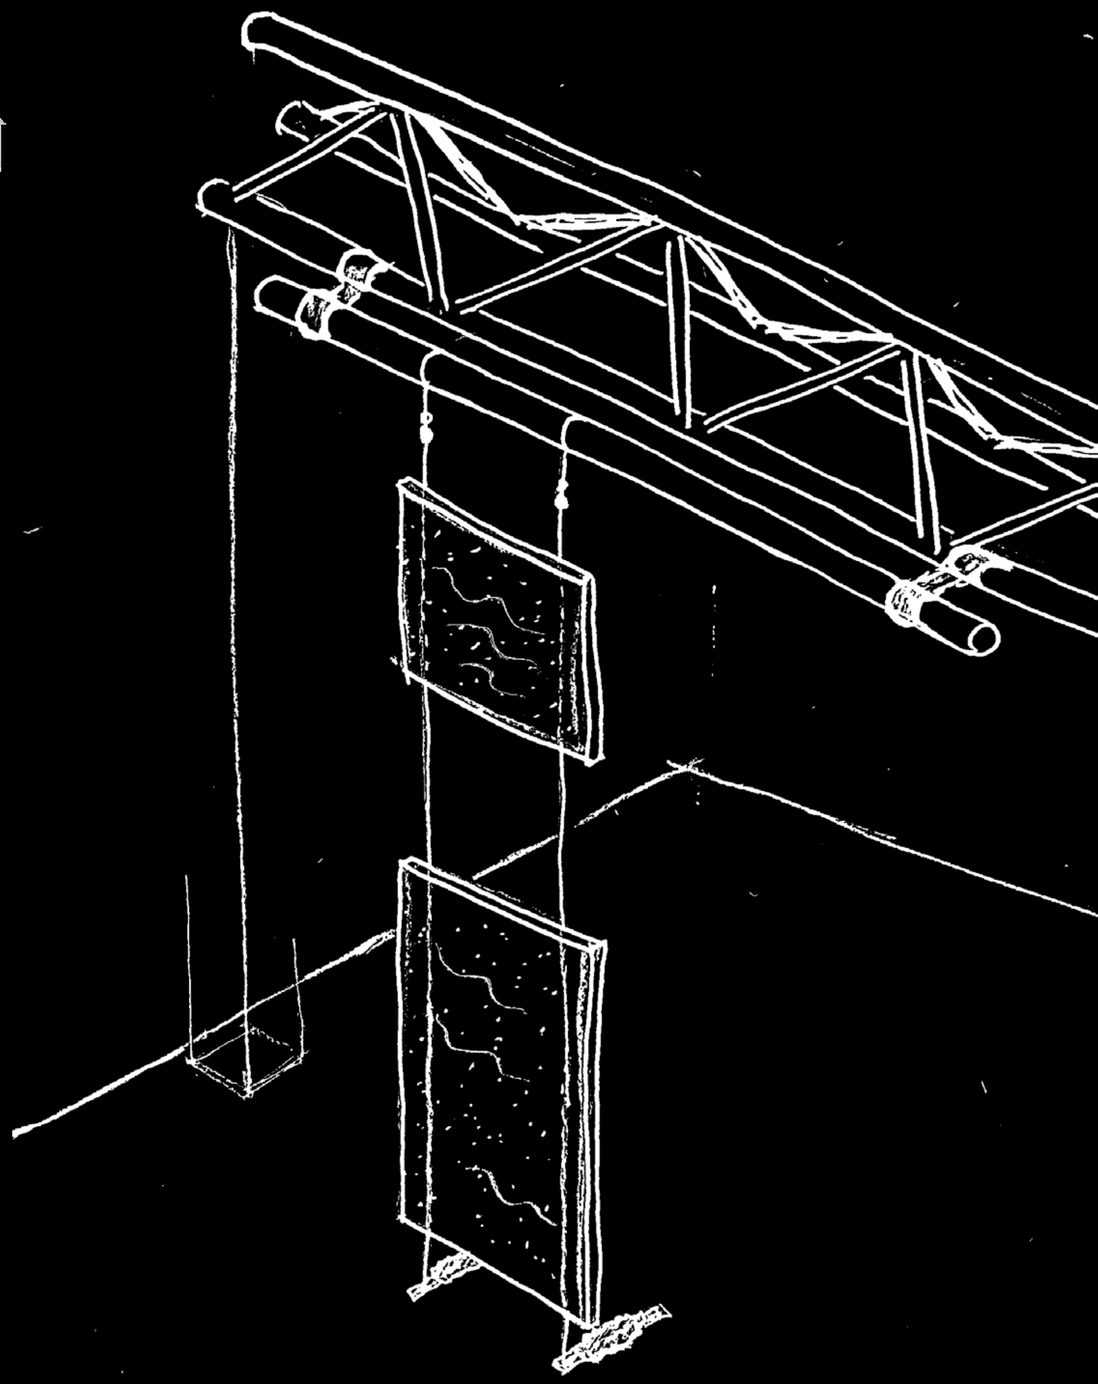

Wood panels from furnitures.

Zinc plates for boat hulls.

The parterre

The bar and merch zone is made from wood, fabric and **reclaimed materials**, integrated with subtle 3000 K LED strips. Their design draws from the **Abruzzo landscape** and traditional trabocchi, combining functionality, simplicity and material character in arecognizable, welcoming form.
A green strip along the parterre creates a more intimate area for resting and experiencing the music without becoming detached from the square.
I had to build and adjust the project to the needs and unexpected issues that came up during the process.

Materials used

Fabrics
Re-used and donated by sofa and furnitures companies

Pallets and slats
Donated from local companies

Strips led

Aluminum uprights

03

Spiraluma

A Project about re-use design.
Team project
2 months - 2026

The Idea

Spiraluma was created from the need to give new life to **industrial waste** produced by a local company. Every day, tons of air-conditioning tubing are discarded, often while still perfectly intact. Through this project, I explored how their useful life could be extended by taking advantage of their physical properties.

Once coiled and properly processed, the tubes can be transformed into a d**urable outdoor toy** whose shape and movement recall a snail.

A new type of process

I chose to begin with a **practical design process**, allowing the object to evolve through experimentation during construction. This created a **continuous dialogue between designing and making**, with both developing in parallel and providing a more practical and complete understanding of the object.

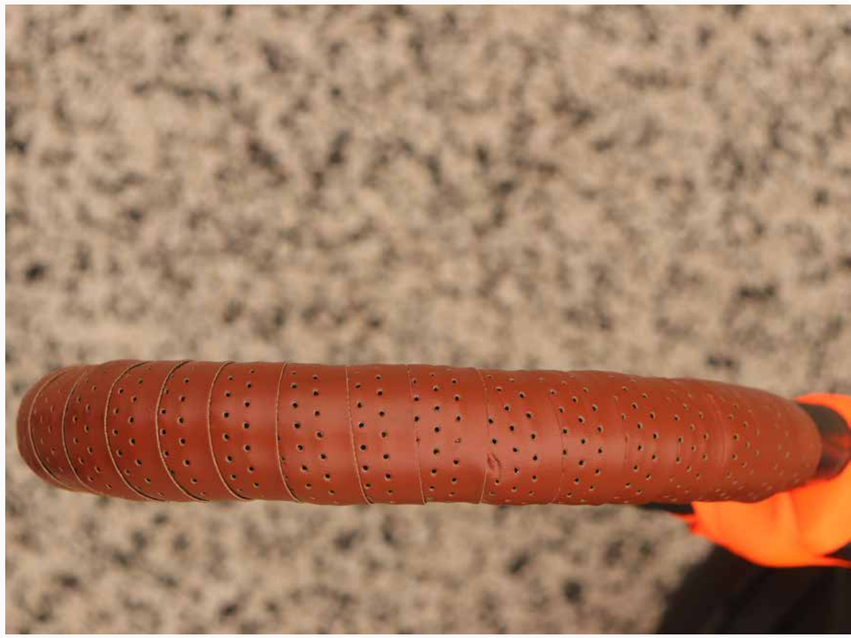

The first step was to create the loop and the snail-shaped structure, which was then secured with screws and washers to keep it stable and safe, while preserving its ability to flex under the user’s weight and then push back upward, returning to its original shape.

Custom supports, familiar touchpoints

After several iterations, I developed **rain-resistant seats** and supports to improve stability, using 3D modelling and additive manufacturing. To keep the design **affordable and replicable**, I added road-bike grip tape, providing both a clear handhold and tactile contrast for the child.

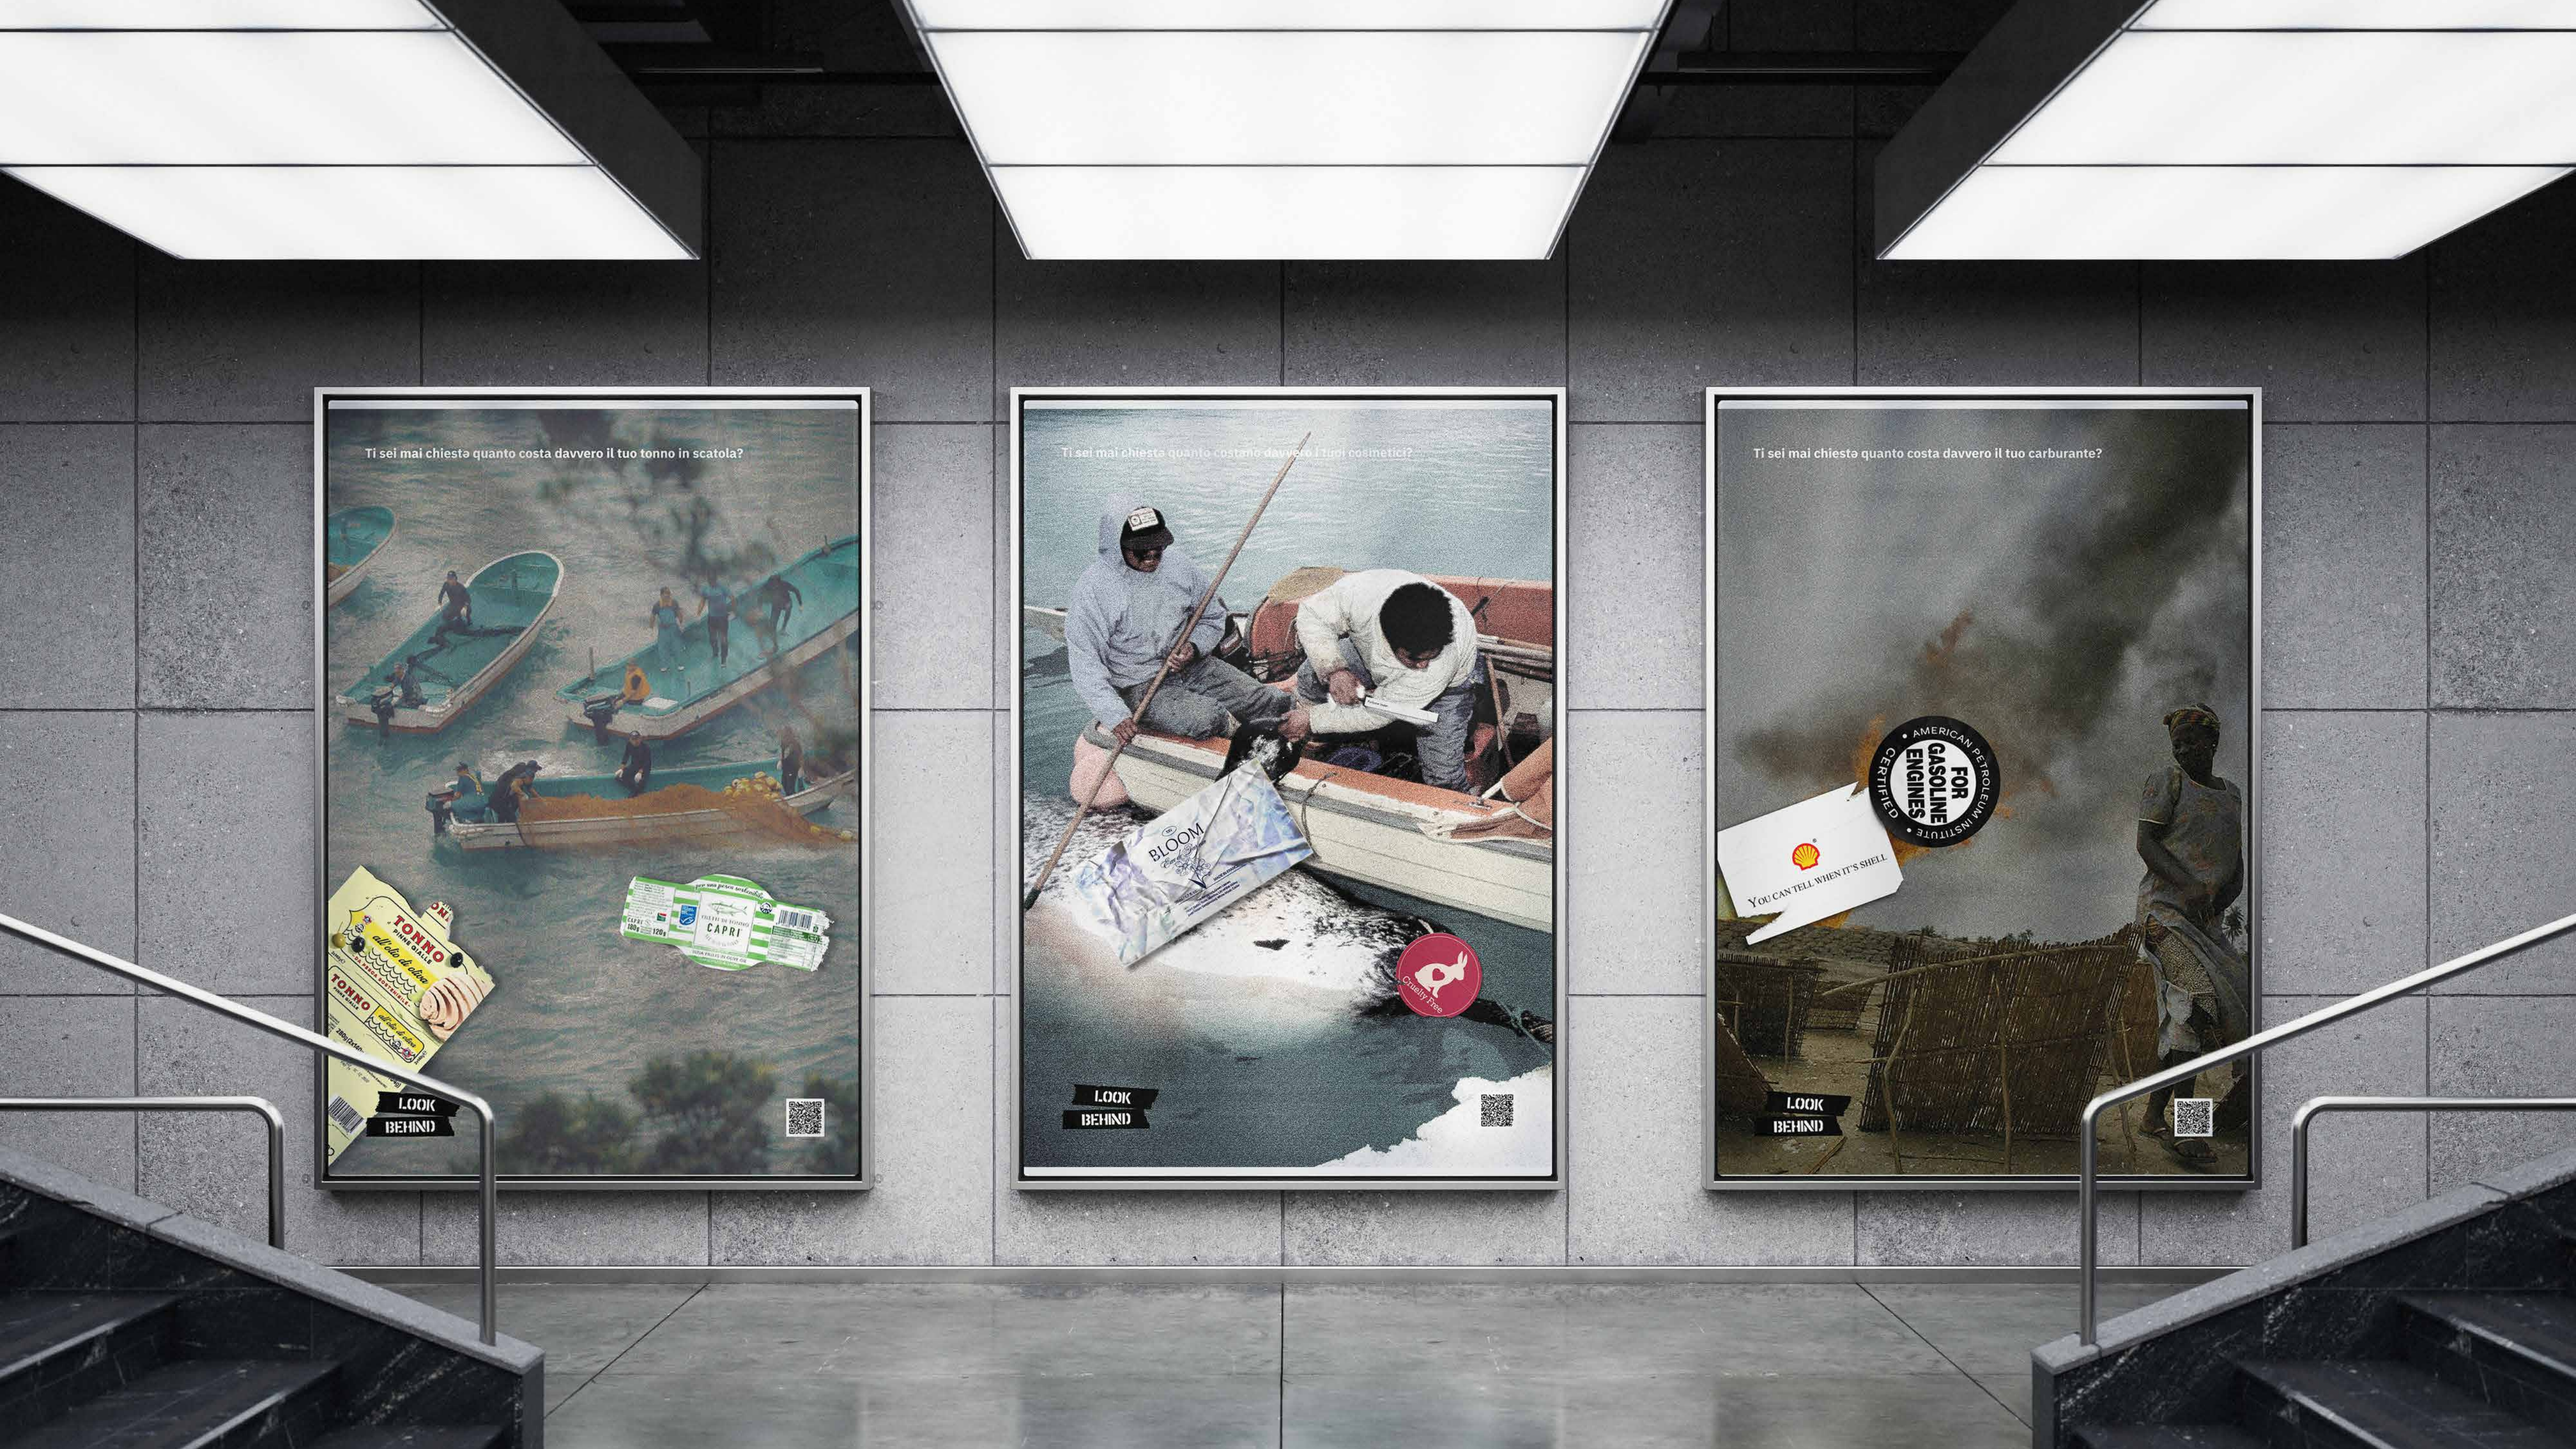

04 Look Behind

What’s behind your favourite products?

LOOK BEHIND

A way to stand against harm justified in the name of profit.

In a product-saturated world where ethics are increasingly sacrificed for profit, I wanted to develop a project that raises awareness of the environmental and social consequences behind consumer choices.

The goal was to create a **complete communication product**, combining physical and digital media to expose the practices hidden behind certain brands, promote more ethical purchasing decisions, and reach the widest possible audience. The project therefore works both as a **tangible product** and as a broader communication system designed to inform, engage, and encourage conscious forms of boycott.

Stand right in front of the conseguences of your choices.

Unfortunately, guilt is often one of the strongest forces that pushes people to change the way they live. My research therefore led me to what seemed like the most effective approach: making people understand that their own choices, not only those of large corporations, can directly affect the lives of others.
This led to the decision to use explicit imagery, partially concealed by familiar brand labels, and confront the viewer with a simple question:
“How much does your … really cost?”

The attention problem.

However, very few people actually stop to look at posters as they walk past them. For this reason, I decided to place the posters inside **specially designed totems**, positioned in contexts where it would be difficult to resist the temptation to discover what was hidden inside—and, ultimately, what lies are hidden behind our own choices.

Physical object, digital layer.

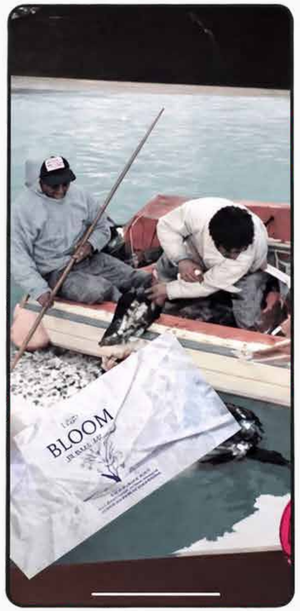

But the interaction goes on, if the user scans the **QR code** it will bring him to a **website** designed to show the problem and to give solution to him, if he download the **Artivive app** and scan the poster, he can reveal himself the truth behind the labels.

App Store
Google Play

1. **Install** the Artivive app

2. **Find** artworks marked with the Artivive icon

3. **View** the artwork through your smartphone

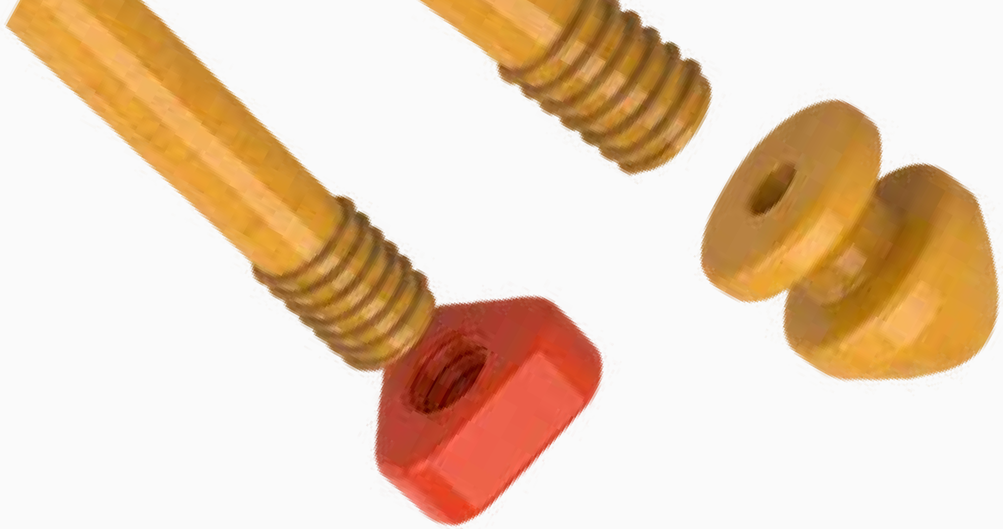

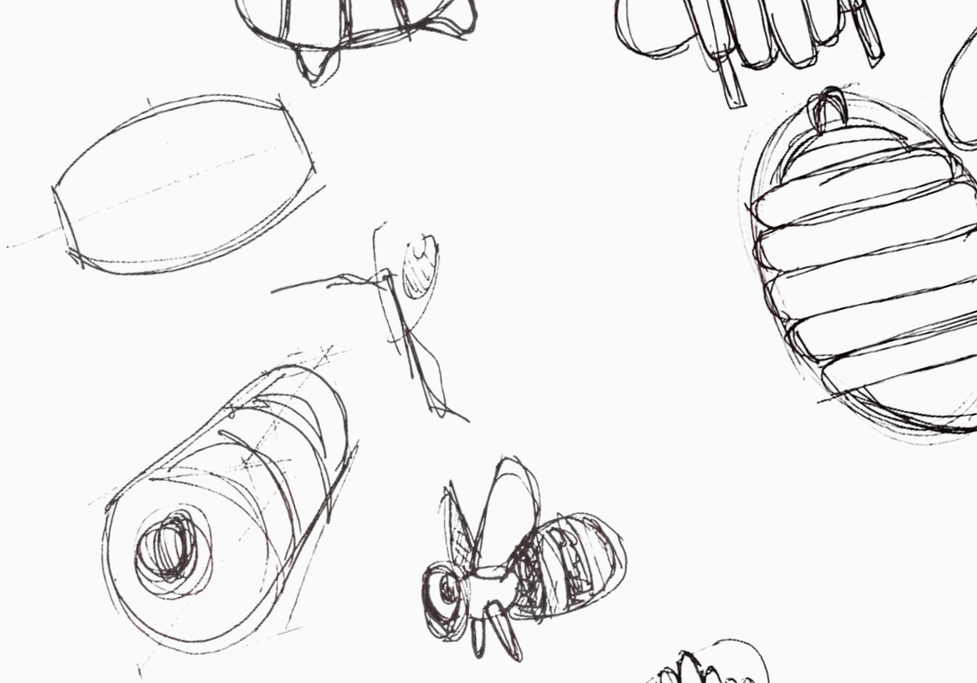

Ring Monsters

A way to stimulate children's imagination.
Team project
2 months - 2024

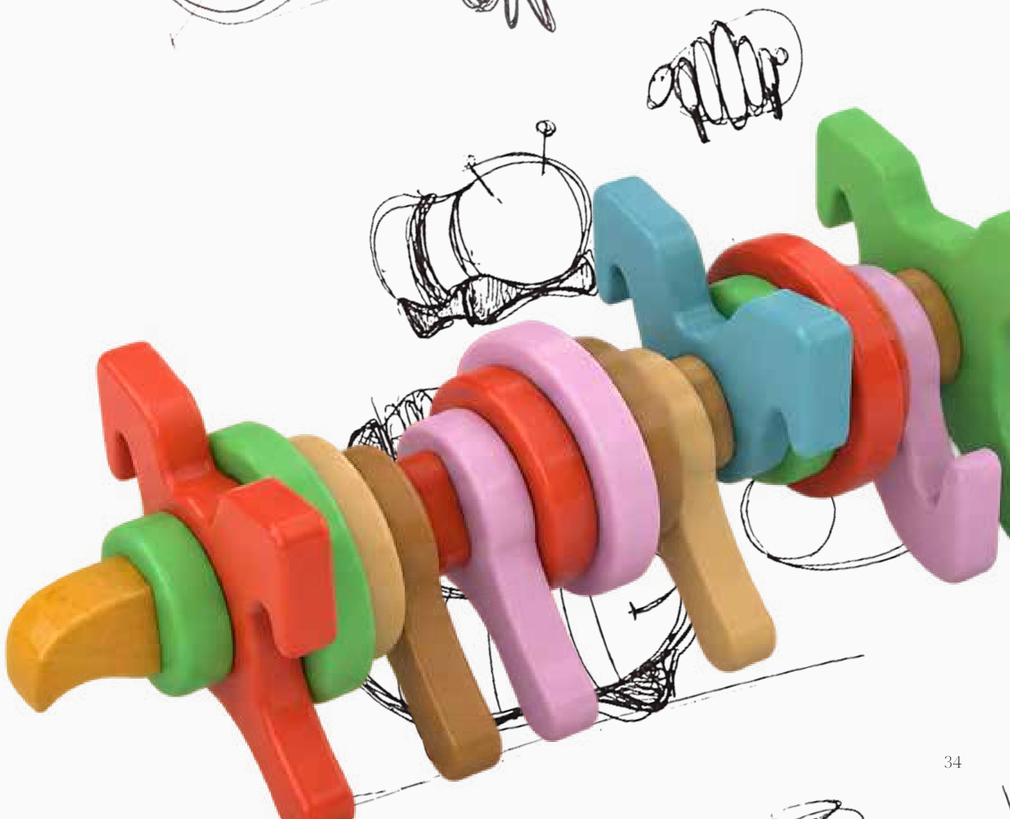

The product

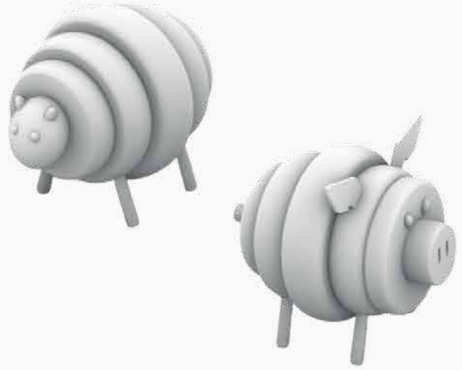

Ring-Monster originated as a university project aimed at designing a toy concept for **IKEA**. I began by researching the target audience, identifying children aged 4–6 and focusing on what I felt was often missing from toys for this age group: the stimulation of **imagination** and the utility of the toys, when the kid grows up, in fact the assembled figures can **also be used as decorative objects**, thanks to their compact size, to remember the good old days.

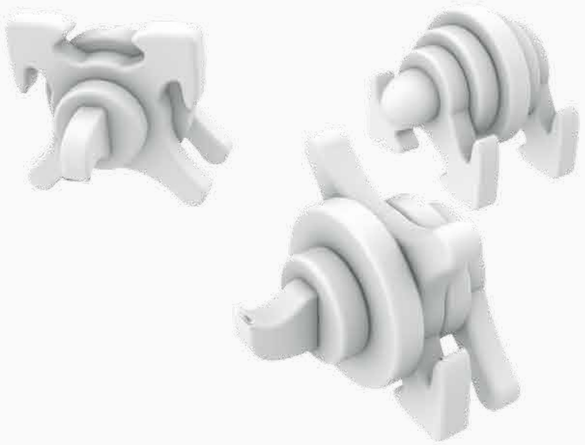

The process

Inspired by the simplicity of a classic Fisher-Price stacking toy, I reinterpreted its basic concept in a more abstract and open-ended way. The animals gradually became less literal and more modular, allowing children to combine the pieces in countless different ways.
Individual components were also designed to take on **different meanings** depending on how the creature was assembled—for example, the same element could become a wing, a fin, or another body part.
The aim was to create a toy capable of bringing a child's imagination into the physical world, encouraging them to continuously **invent, transform, and reinterpret their own creatures**.

Thank you
